Compass(b)

Barley

VARIETY SUMMARY

- Exceptional grain yield
- Domestic and export malt quality profile (malt accreditation decision expected March 2016)
- Low screenings and high retention package
- CCN resistance
- Mid to early maturity
- Medium plant height with strong straw and good head retention

AREA OF ADAPTATION & GRAIN YIELD

Compass is a broadly adapted variety that is suited to all barley growing areas of Australia, including QLD, NSW, VIC, TAS, SA and WA.

Yield tables: Long term (2005-2013) analysis of grain yield from NVT trials % Site mean.

Northern New South Wales & Southern Queensland

	New Sou	th Wales	Queensland

Factsheet

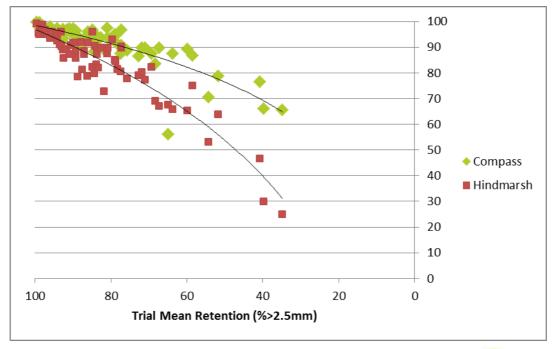

GRAIN QUALITY

Compass is the new standard for grainsize, with lower screenings and superior grain plumpness. The graph below shows mean grain plumpness (% > 2.5mm) from 2013 National Variety Trials in the Mid North of South Australia. This group of trials experienced significant moisture stress during grain filling with Schooner just meeting the 70% retention limit for malting barley.

The grain plumpness (%>2.5mm) of Compass compared to Hindmarsh is shown in the graph below. Grain plumpness is plotted as a function of the trial site mean for each of 69 NVT trials conducted in 2013. Compass has significantly better grainsize and the advantage increases in more stressed conditions. In 2013 Compass exceeded the 70% retention standard for malting grade in all but three trials, whereas Hindmarsh failed at 10 locations (14% of trials).

DISEASE RESISTANCE

Compass offers a strong disease resistance profile. Compass has superior net form net blotch resistance than Commander and Fleet, although the nature of this disease means all varieties should be monitored in high risk situations. Compass provides resistance to CCN and compared to Hindmarsh, it also offers improvements in resistance to powdery mildew, black point and spot form net blotch.

The ratings for Compass in the table below are based on NVT field reactions where natural and mixed field pathotype infections have occurred and observations from the Elite Barley Disease Nurseries (EBDSN) conducted by each of the state cereal pathologists.

Table: Regional disease ratings for Compass

	Queensland	New South Wales	Victoria	South Australia	Western Australia
CCN	-	-	-	R	-
Powdery Mildew	MS	MR	-	MR	MR
Leaf Scald	-	SVS	MS#	MRMR-S	-
Leaf Rust	S	MRMS	MR#	MR	MR
Spot Form Net Blotch	MRMS	MSS#	MSS	MRMS-MSS	MSS
Net Form Net Blotch	MRMS	MS	MR#	MR-MRMS	MRMS-S
BYDV	-	-	-	-	MRMS*
Black Point	-	-	-	MSS	-

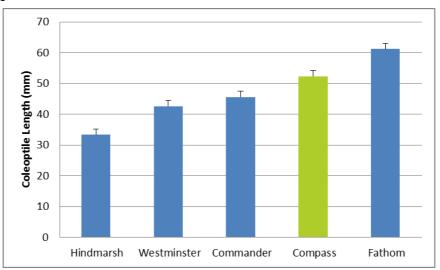

#Indicates that regional differences in pathotypes are likely and therefore the Compass may perform better than the rating allocated. *These ratings are provisional – treat with caution.

PLANT CHARACTERISTICS

Compass is most similar in plant architecture to Commander, but with notably improved straw strength and lodging resistance. The higher yield potential of Compass means crop nutrition must be appropriately considered. In trials where a single nitrogen regime is applied Compass is typically 0.4% lower in grain protein than Commander. The improved lodging resistance makes Compass better suited to early sowing, higher fertility paddocks and higher nitrogen rates than Commander.

Compass has good coleoptile length which improves potential crop establishment particularly with variable or deliberate deep sowing. Compass typically exhibits slightly longer coleoptile length than Commander and is considerably longer than Hindmarsh, LaTrobe and Buloke.

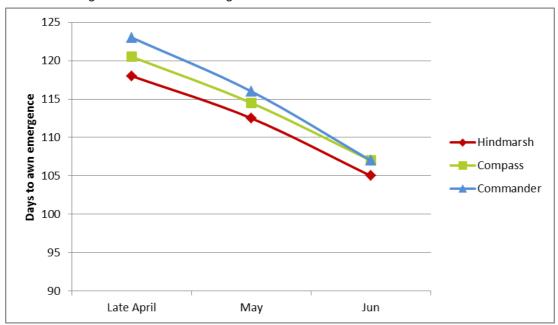

VARIETY MATURITY

Compass is a medium maturing variety reaching heading approximately 1-2 days earlier than Commander and 2-3 days later than Hindmarsh with mid-May sowing. Compass is less sensitive to photoperiod than Commander with very similar flowering times with later sowing such as mid-June.

PLANT BREEDER RIGHTS AND ROYALTIES

Compass is protected by Plant Breeder Rights, any unauthorised commercial propagation or any sale, conditioning, export, import or stocking of propagating material of this variety is an infringement under the Plant Breeder's Rights Act, 1994.

Growers are allowed to retain seed from production of this variety for their own use as seed only.

An End Point Royalty of \$3.80 + GST per tonne which includes breeder royalties, applies to this variety.

BREEDING

Compass' pedigree includes Commander and a European variety named County.

ACKNOWLEDGEMENTS

Compass was bred by the University of Adelaide with support from Viterra and GRDC.
